

**SAFETY  
JOGGER  
WORKS**

**INDUSTRIAL   PROFESSIONAL   TACTICAL**

A word from our General Manager,  
Wim Vanderschuere.

First of all, I would like to thank you for your interest in the Safety Jogger footwear range.

I must say that, in my family, innovation in footwear has always been the key driver. With a clear focus on quality, comfort and pricing we aim to develop the right shoes for the right people.

To this day, our family-owned company Cortina sells over 32 million pairs of shoes worldwide on a yearly base, with the experience and knowhow of a highly motivated team and an unparalleled supply chain.

I am proud that for Safety Jogger, I can count on the same international organization to offer you a wide range of innovative safety products. As part of the Cortina, all investments come from the company's own capital, making us a very stable and future proof partner.

In today's competitive landscape, we strive to bring noticeable added value in terms of innovative product development, marketing and sales to all our valued customers.

Whether you have bought Safety Jogger, Oxypas or Maxguard before, you are part of our loyal distributor network or you would like to work with us in the near future, I will always be glad to be at your service.

I cannot predict the future, but I am certain it will be a safer one when we shape it together.

Wim Vanderschuere  
wim.vanderschuere@safetyjogger.com

- 1950** Start of our history in shoe knowledge with the establishment of a small shoe factory in **Belgium** with the name '**Cortina**'.
- 1981** Launch of the Cortina **Safety footwear collection**. As people mostly bought basic joggers to go to work, we felt the need to develop footwear with enhanced protection to help reduce the huge risk of workplace hazards.
- 1990** Registration of the brand name **Safety Jogger in Benelux**. A collection of high protection (safety) athletic footwear (joggers) was born.
- 2000** Launch of the brand **Safety Jogger in Europe**, with own distribution from our **warehouse in Belgium**.
- 2007** Selling the first pair of Safety Jogger footwear in **Asia** and ready for **expanding** our worldwide distribution network.
- 2011** Development and manufacturing of the Safety Jogger work **gloves collection** to protect more than only people's feet.
- 2013** Acquisition of **Oxypas**, the N° 1 brand for medical and professional footwear in France.
- 2014** Launch of **Safety Jogger in Russia**.
- 2015** **Safety Jogger goes USA**. To ensure our global 'always-in-stock' guarantee, we set up a brand new warehouse in Anaheim, California.
- 2016** Investing in innovation and technology. Using a **3D printer** with **state-of-the-art software** to develop faster and according to the highest industry standards.
- 2017** Merged with **Maxguard**. Eight years after the founding of Maxguard, Maxguard opted for a **company merge with Cortina NV**.  
**Traction by Shoes for Crews**. Shoes for Crews and Safety Jogger are introducing a new range of safety shoes into the European market in October 2017.
- 2018** Launch of the **Lightweight & Tactical** collection.
- 2020** Rebranding of Safety Jogger.

## ENGINEERED IN EUROPE

All safety products are ergonomically and esthetically engineered by a European design team, with the support of experienced professionals. Founded in 2001 as part of the Cortina, Safety Jogger benefits from the extensive know-how of this international family-owned company with over 60 years of experience in the development, production and distribution of shoes and apparel, located in Belgium.

## VISION

At Safety Joggerz, it is in our nature to protect. We strongly believe in active workplace risk prevention by developing professional footwear, gloves and socks that meet the highest global industry standards.

## AMBITION

Our goal is to bring exceptional added value in terms of product quality, service and innovation putting the protection of people at work first. As we control every step from the design to the distribution, we aim to offer a profound technological expertise tailored to the requirements of our customers worldwide.

## INNOVATION

We always want to be one step ahead when it comes to design, comfort and protection. Continuous investments in product development, research and state-of-the-art technology allow us to manufacture the most advanced safety products, based on real-time market demands.

Our in-house design and development teams can count on the latest specialized software, a modern sample making facility, a professional lab and a revolutionary 3D printer to implement new technologies faster, more precise and with less waste. This results in a well-balanced collection of fashionable and innovative safety products for both men and women. Always in stock and 24/7 available on our online order platform.

### comfortable insole

The comfortable insole is developed with an exceptional perforated structure. This ensures lightness, air breathability and comfort all day long. The insole takes full-surface foot support to the next level while maintaining all other features such as shock impact zone, arch support, shock absorption, electro static discharge. With this insole, your feet will feel comfortable and fresh all day long.

### ultimate shock absorption

### self-cleaning outsole profile

### puncture resistance, steel & woven fabric midsoles

### certified slip resistance

**SRA** slip resistant soles are tested on a ceramic tile wetted with dilute soap solution.

+ **SRB** slip resistant soles are tested on smooth steel with glycerol.

= **SRC** slip resistant soles pass both SRA and SRB slip resistance tests.

### protective toe cap in STEEL, COMPOSITE or NANOCARBON

A protective toe cap made according to European or ASTM standard will protect the feet from impact, regardless the material.

**Steel** toe caps are naturally stronger than composite toe caps, a thinner layer is used in the work boots to reach the same strength as a composite toe. They are conducting cold, heat and electricity.

**Composite** toe caps are lighter compared to a steel toe, reducing stress and fatigue on the legs and joints throughout long workdays. They are not conducting heat or cold in extreme temperatures, for extra comfort.

**Nanocarbon** toe caps are thinner than a composite toe and are therefore a solution for the thicker and bulkier composite toe.

**Composite** and **Nanocarbon** toe caps are metal free and practical when working in electrical hazardous environments, or workplaces with metal detectors such as courts, airports,...

## THE MOST **COMFORTABLE** WORK SHOES

Be pain-free on any work environment with a pair of comfortable work shoes. Get more work done and stop wasting time dealing with sore muscles or aching feet. Our collection of stylish, comfortable work shoes is designed to provide an all-day comfort. Most of you work about 8 hours every day, 5 days of the week all year round, so the last thing you want is discomfort and pain in your feet.

Safety Jogger offers comfortable work shoes suitable for heavy outdoor jobs and labour that requires strenuous activity. We have comfortable work shoes for men and women benefiting from trendy designs, soft linings, state-of-the-art impact foam, air cushioning, breathable leather, and so much more to bring you the comfort you desire.

### **WHAT IS A COMFORTABLE WORK SHOE?**

First of all, you need a comfortable work shoe that keeps your feet dry, offers support and hug your feet without rubbing it the wrong way. If they rub your feet the wrong way, you've got a long day full of aches and pain ahead of you. And we don't want that, right?

While all brands claim that their work shoes are the best or the most comfortable on the market, you don't want to find out the truth about comfort the hard way. Everyone has their own opinion and thoughts when it comes to comfort but overall, a comfortable pair of work shoes should be:

- **Water repellent yet breathable**
- **Shock absorbing**
- **Lightweight and flexible**
- **Have comfortable ankle support**

## FEATURES FOR A COMFORTABLE WORK SHOE

### **SOLES**

The soles of work shoes can make all the difference when you work on your feet all day. They could be the difference between a long, painful day and a nice, comfortable day.

### **INSOLE**

For additional comfort and support, think about adding some great insoles to your boots. The new and revolutionary Safety Jogger Impact foam takes full-surface foot comfort to the next level. The unique shape constantly adapts to the pressure of the foot, improving every step you take. An exceptional Air Breathability technology and extra Shock Impact Zone at the heel keep your feet comfortable and fresh all day long.

### **MIDSOLE**

Choose the sole which is right for you. There are big differences in comfort and purpose between a steel or woven fabric midsole. Learn every difference between the 2 in the section puncture resistance.

### **OUTSOLE**

Not only do you need a comfortable sole that can withstand the elements, you also need a sole that provides support so that every step isn't a painful one. Rubber outsoles are slip-resistant and provide maximum traction.

The use of polyurethane makes a lightweight flexible sole which is not only shock absorbent but also extremely hard wearing.

### **SAFETY TOE**

When it comes to comfort and safety toes, Choose the right type of toe for your individual work environment, and maybe look for comfortable shoes that sport an extra wide steel toe, which will mean more room to move. Some Safety Joggers are actually made to have wider toe-spaces for extra comfortable steel toe shoes!sole which is not only shock absorbent but also extremely hard wearing.

## SJ HYBRID INSOLE

The SJ Hybrid insole is developed with an exceptional perforated structure. This ensures Lightness, Air Breathability and Comfort all day long. The SJ Hybrid insole takes full-surface foot support to the next level while maintaining all other features such as Shock Impact zone, Arch support, Shock Absorption, Electro Static Discharge. With the SJ Hybrid insole, your feet will feel comfortable and fresh all day long.

## TOE CAPS

### STEEL

Steel toe caps are used since the 1930's and are still very popular, they protect your toes from basically every impact & compression injury. Steel is naturally stronger than all other materials used in the manufacturing of toe caps. Because of its strength, the toe cap has also a thinner layer leading in more space around your toes.

### COMPOSITE

Composite toe caps are made from non-metal materials such as fiberglass, carbon fiber or plastics and offer an impact protection of minimum 200 Joules. They are getting very popular due to a couple of benefits. They are lighter than steel toe caps and don't conduct the heat or cold in extreme weather or work conditions, resulting in extra comfort. Because of the metal-free characteristics these type of boots are also beneficial for people working as security or law enforcement.

### ALUMINIUM

Aluminium toe caps, also known as "alloy toes", have been developed to bring the resistance of steel toes to a lighter weight (30-50% lighter than steel). Alloy toes are not metal free, however they have a low profile, which makes them ideal for sportive safety shoes. The average weight of the aluminum toe is about 50/60gr.

### NANO CARBON

Innovative Carbon Nanofiber material makes these safety toes the lightest and most advanced safety toe available on the market. The weight of the SJ Nano Carbon toe cap is 50% less than a traditional steel safety toe cap and 40% less than a standard composite toe cap. The toe cap will not conduct heat nor cold, will not activate metal detectors, is non-magnetic, and static free, thus ensuring safety first!

## MIDSOLES

### STEEL

Puncture resistant steel midsoles are made from stainless or coated steel. While they are less flexible than woven fabric midsoles, steel midsoles offer the highest level of protection against perforation. These midsoles are thin and embedded in the outsole construction, you cannot see them when taking off your safety shoes.

### PUNCTURE RESISTANT SJ FLEX / MAX-FLEX

The puncture resistant midsole is made of Aramid (woven fabrics with high tenacity) which make these safety shoes light and metal free. It prevents puncture flesh wounds which are particularly awful and can lead to dangerous infections and/or permanent foot damage. The midsole is also flexible, which leads to more comfortable walking.

## OUTSOLES

### PU

Many of our shoes have the soles attached to the uppers by a process where 2 materials are brought together in a mould, the resultant chemical reaction forms polyurethane (PU). The use of polyurethane makes a lightweight flexible sole which is not only shock absorbent but also extremely hard wearing, that's why polyurethane is ideal for safety shoes. Single density PU is generally an injection molded outsole.

### PU / PU

PU/PU is a double-density profile sole made of PU (polyurethane). It can withstand hydrocarbons, but not strong acids. The resistance to temperatures goes from -20 degrees Celsius to max 150 degrees Celsius. It has good slip resistance and the soft PU midsole provides good impact absorption and wearing comfort.

### PU / TPU

TPU stands for thermoplastic polyurethane, and like PU and PU/PU outsoles, PU/TPU outsoles are usually injection molded outsoles. PU/TPU outsoles are flexible, sturdy and very resistant to abrasion. Because TPU is made for a thermally formed granulate, it can provide greater slip resistance, which is comparable to that of rubber. It also tends to be more durable and resistant to the cold than PU outsoles. However, it provides less resistance to high temperatures. At work environments that involve making contact with hot surfaces you'd rather choose rubber outsoles.

### PU / RUBBER

This type of outsole has similar properties to mono density rubber outsoles, except that the midsole is made of PU, which makes the safety shoe lighter. While PU makes a lighter, more comfortable safety shoe, it can be a less durable when you're working in harsh environments, that's where the rubber comes to play. PU/Rubber outsoles are actually best of both worlds.

### BASF PU / RUBBER

One of the main technical challenges with polyurethane is overcoming a natural aging deterioration process known as 'hydrolysis'. A chemical breakdown of the PU polymer results in a physical breakdown or crumbling of the PU sole. This process is accelerated by warmth and high humidity and will occur more quickly in tropical climates. With more than 50 years of experience, BASF Polyurethanes is the leading supplier of hydrolysis-resistant polyurethanes.

### RUBBER

Mono density rubber outsoles are exceptionally sturdy. They offer a great resistance to extreme temperatures (from -30°C to 300°C), are hard to penetrate and resistant to fuel, oil, microbes and numerous chemicals. However, rubber outsoles are heavier and less flexible than PU or TPU. Rubber outsoles are also known for great slip resistance performances.

### PVC

PVC is a thermoplastic material generally found in rubber boots, the outsoles made with this material usually have very good resistance to strong chemical agents like acids. It has good cold resistance. It has very high resistance to hydrolysis so the storage longevity is high. It has an abrasion resistance.

### EVA / RUBBER

Ethylene Vinyl Acetate (EVA) is a type of insulating foam that won't absorb water. It's also elastic, which makes it slip and tear resistant. EVA is one of the lightest materials available for midsoles. EVA outsoles are frequently found in sports shoes but also in safety footwear, usually placed between the upper and lower outsoles, which are typically made of rubber. EVA often gets marketed under the name "Phylon".

## NANO CARBON TOE CAP

Innovative Carbon Nanofiber material makes these safety toes the lightest and most advanced safety toe available on the market.

The weight of the SJ Nano Carbon toe cap is **50% less than a traditional steel** safety toe cap and **40% less than a standard composite** toe cap. The toe cap will not conduct heat nor cold, will not activate metal detectors, is non-magnetic, and static free, thus ensuring safety first!

The Safety Jogger Lightweight collection with SJ-3FIT is the must-have for the hybrid workplace. With unique features such as a **removable hybrid insole** with a built-in **air circulation** system and **shock absorption**, you will have one of the lightest safety shoes on the market.

SJ-3FIT-SYSTEM®

## TECHNOMESH LINING

The **breathable** technomesh keeps your feet dry and comfortable. As you walk, air is pushed and circulated through the fibers allowing the skin to breathe. 360° foam guarantees a great support feeling around the foot.

## SRC - CERTIFIED SLIP RESISTANCE

The SRC standard meets the requirements of both SRA and SRB, meaning the slip resistance of the outsole was tested on a ceramic tile wetted with a dilute soap solution and on smooth steel plate with glycerol. Safety Jogger's slip resistant outsoles pass both tests with glance and do not only fulfill the minimum standards, but exceed them remarkably.

**SRC SLIP RESISTANCE**

**OIL RESISTANT PHYLON**

Safety Jogger has a variety of safety hiker boots, which are **perfect for many adventures**. As well as protective toe caps, our hiking boots also benefit from additional safety features, such as puncture resistant midsoles and a high level of cushioning & impact protection.

## ESD OR ANTISTATIC SAFETY SHOES?!

Antistatic and ESD safety shoes are both conductive safety shoes. This means they protect electrical equipment by sending (conducting) electrical charges to the ground, preventing a static shock, charge or spark. Conductive safety shoes are worn in industries in which a static shock is problematic or could trigger a fire or explosion. This is not the same as isolating safety shoes, like EH-rated ones, which protect you from completing an electrical circuit to the ground.

### ANTISTATIC SAFETY SHOES VS. ESD SAFETY SHOES

ESD and antistatic bring a lot of confusion, and not just when it comes to safety shoes. While one includes the other, it's incorrect to say the same in reverse. Although both terms refer to contact resistance, there are fundamental differences between the two.

**ANTISTATIC** safety shoes have a low electrical resistance between 0.1 and 1000 MegaOhm (MΩ). The use of antistatic safety shoes prevents a build-up of static electrical charges in the human body by sending these charges to the ground, preventing a sudden flow of electricity between electrically charged objects caused by contact.

**ESD** (or ElectroStatic Discharge) safety shoes on the other hand, have an even lower electrical resistance between 0.1 and 100 (MΩ). The use of ESD safety shoes prevents a build-up of static electrical charges in the human body by sending these charges to the ground in a very safe and controlled manner. They guarantee to prevent the sudden flow of electricity between electrically charged objects caused by contact.

### ANTISTATIC

Antistatic safety shoes reduce the chance of electrostatic discharges.

- Electrical resistance between 0.1 and 1000 (MΩ)
- Norm - EN 20344: 2011 5 10
- Sufficient dissipative capacity
- 100% Tested in production

### ESD

ESD safety shoes prevent uncontrolled electrostatic discharges.

- Electrical resistance between 0.1 and 100 (MΩ)
- Norm - BS EN 61340-4-3: 2002 (IEC 61340-4-3:2001)
- Guaranteed extremely low electrical resistance under any conditions
- 100% Tested in production

Requirements:  
0.1MΩ < ESD < 100MΩ  
0.1MΩ < ANTISTATIC < 1000MΩ

DBN-087

BRN-150

## METEOR S3

Coolmax technology was originally developed for athletes. The material transports moisture and sweat, so that the body stays dry. We found it extremely suitable for people who work hard for hours every day too.

### Heavy Duty mid-cut safety shoe with Coolmax® lining

<b>Sole</b>	PU/rubber
<b>Toecap</b>	Composite
<b>Midsole</b>	Puncture resistant SJ FLEX
<b>Lining</b>	Coolmax® / Mesh nylon
<b>Insole</b>	Soft Impact Foam
<b>Category</b>	S3 / SRC HRO ESD
<b>Size range</b>	EU 37-48 • UK 4-13 • US 4.5-13.5 • CM 24-31.5

Safety shoes with a heat resistant outsole can resist a contact heat of 300°C. These soles are resistant against the most chemicals and abrasion.

### Mid-cut brown safety shoe with a heat resistant outsole

<b>Sole</b>	Phylon + rubber
<b>Toecap</b>	Composite
<b>Midsole</b>	Puncture resistant SJ FLEX
<b>Lining</b>	Alaskafelt
<b>Insole</b>	Soft Impact Foam
<b>Category</b>	S3 / SRC HRO
<b>Size range</b>	EU 38-47 • UK 5-12 • US 5.5-13 • CM 25-31

## CERTIFIED STANDARDS

There are 2 MAIN STANDARDS for safety footwear: ASTM 2413 & EN ISO 20345. Besides these 2 main standards, Safety Jogger pays attention to other safety footwear standards as well (AS/NZS, JIS, LA, SNI, SIRIM, GOST, OHSC) but they are generally based on ASTM & ISO.

### ASTM 2413 - 17

The American Society for Testing and Materials (ASTM) is an international standards organization that develops and publishes voluntary consensus technical standards or certifications. ASTM announced in 2005 that their ANSI Standard was withdrawn and replaced by two new ASTM standards, titled F2413 Standard for Performance Requirements and F2412 Standard for Foot Protection Test Methods. These new safety footwear standards provide safety and performance previously put forward by ANSI since 1967.

The biggest difference with ASTM 2413 to other standards is that the outsole can be certified as EH (Electrical Hazard), in other words the outsole must be completely insulated against electric shocks. Other requirements for ASTM 2413 conforming safety footwear are the usual impact / compression resistance for the toe area, puncture resistance, water resistance and more.

### EN ISO 20345 - 11

The current safety footwear standard across Europe is updated in 2011 to make it stricter, all products must be manufactured, tested and certified under EN ISO 20345. This safety footwear standard requires all safety shoes to have front foot protection against a 200 joule impact. This is the amount of energy the toe region can absorb before breaking.

Under the EN ISO 20345 standard there are different safety classes like S1 or S3 for example. Every safety shoe according to the EN ISO 20345 safety footwear standard will be tested on all possible aspects and will be granted an S-class. Below you can find a complete overview of the minimum requirements for each safety class within the EN ISO 20345 safety footwear standard.

BLK-217

**WATERPROOF**  
**6X STRONGER**

### COSMO LINING

The Cosmo membrane keeps the water out and offers climate comfort for the feet, meaning a degree of breathability to avoid the feet to be overheated or becoming humid by locked-in sweat.

### Mid-cut waterproof ESD safety shoe

Sole	PU/PU
Toecap	Composite
Midsole	Puncture resistant SJ FLEX
Lining	Coolmax® / cosmo
Insole	Soft Impact Foam
Category	S3 / SRC ESD WR
Size range	EU 36-47 • UK 3.5-12 • US 4-13 • CM 23.5-31

**ESD**  
electro  
static  
discharge

Static discharges can ignite flammable mixtures and damage electronic components. ESD footwear prevents a build-up of static electrical charges in the human body by sending them to the ground in a very safe and controlled manner.

### Low-cut waterproof ESD safety shoe

Sole	PU/PU
Toecap	Composite
Midsole	Puncture resistant SJ FLEX
Lining	Coolmax® / cosmo
Insole	Soft Impact Foam
Category	S3 / SRC ESD WR
Size range	EU 38-47 • UK 5-12 • US 5.5-13 • CM 25-31

### TESTING THE WATERPROOF PERFORMANCE

The waterproof performance level of a waterproof work boot is tested on a dynamic (flexion) footwear water resistance machine.

The waterproof work boot is fixed onto a mechanical foot and set into a container of colored water to a defined water depth (approx. 20mm) above the work boot feather line. It is then flexed at a constant speed and angle, while the (potential) penetration of water into the waterproof work boot is reviewed at intervals.

## WATERPROOF WORK BOOTS NOT ONLY IN RAIN CONDITIONS

More than likely you're going to get caught up in the rain at some point on a regular workday. When you do get caught in a downpour, generally you'll come home taking of those wet socks to spot a pair of wrinkled feet. Safety Jogger waterproof (WR) work boots or water-resistant (WRU) work boots are key to prevent these kinds of situations. They **keep your feet nice & dry, without losing any comfort.**

A typical working environment for work boots in contact with liquids is **not only limited to ordinary rain**. Contact with meltwater, snow, steam, mixtures of water with acids, chemical agents, oil, soaps or organic liquids can occur.

Work boots labeled **waterproof** or "WR" provide the **highest quality level of protection from liquids**. Waterproof (WR) work boots do what they say, they keep water out and are leak proof, keeping your feet dry in numerous environments. Work boots labeled with a **water resistant upper** or "WRU" provide a **basic protection** from rain and splashes.

The use of water-resistant or waterproof work boots will depend on the application. An everyday safety shoe will usually have just a water resistant upper (WRU) to protect from the rain. The military for instance will require safety boots that are completely waterproof. (WR)

The flexing action represents a simplified walking action and is designed to simulate flexing stresses in the primary areas known to be weak points. The cyclic uplifting of the toe produces realistic splashing of water over parts of the forepart not immersed.

Besides testing the waterproof sock construction, the test can reveal any wicking effects that can lead to a leaking path for water penetration through the upper of the lining of the waterproof work boots. EN20345 standard requires a minimum of 4.800 flexes for waterproof requirement.

## X470 S3

BLK

### HEAT RESTISTANT OUTSOLE

Safety shoes with a heat resistant outsole can resist a contact heat of 300°C. These soles are resistant against the most chemicals and abrasion.

### Waterproof mid-cut safety shoe with heat resistant outsole

### THE SAFETY JOGGER PU SOLE

There are 2 types of PU soles. There is a Polyether based PU sole and a Polyester based PU sole. Polyether based PU soles have a high resistance against hydrolysis and low oil resistance. Polyester based PU soles have a low resistance against hydrolysis and high oil resistance.

Safety shoes are always using a polyester based PU sole. The basic PU sole used in most safety shoes on the market lasts for 1.5 year in tropical conditions and 3 years in normal conditions.

The Safety Jogger PU sole, upgraded with improved resistance against hydrolysis, lasts for 4 years in tropical conditions and 8 years in normal conditions. Making our safety shoes a reliable product of endurance.

**HEAVY DUTY**

**HIGHLY  
BREATHABLE  
WATERPROOF  
MEMBRANE**

**WATER  
REPELLENT**

**LINING**

The main point of buying waterproof work boots is to keep your feet dry and fresh. Our waterproof work boots even allow breathability for averting sweat when the work environment involves high temperatures, along with a firm insulation in snowy, damp, or rainy areas as well.

## PUNCTURE RESISTANCE

### The difference between STEEL and WOVEN FABRIC midsoles

Puncture fleshwounds are particularly awful because screws, spikes, sharp scrap metal or the famous rusty nail puncturing the foot, **can deposit bacteria and debris deep into the body**, leading to dangerous infections and/or permanent foot damage.

The protective midsoles are embedded during the manufacturing process, between the insole and outsole of the puncture resistant boots. The standard specifies that the protective midsole of puncture resistant boots **cannot be removed without damaging or destroying the boot**. 2 main materials are used for protective midsoles: steel and Aramid (woven fabrics with high tenacity; eg. Kevlar by Dupont, Twaron by Akzo).

When puncture resistant boots have a woven fabrics midsole, they are most likely to have a composite toe cap too to create a **metal-free, lightweight work boot**. A crucial element on sites where metal detectors are used as employees enter and leave, for example high-security environments, such as airports, governmental buildings and military bases, where the scanning aims to prevent weapons from making their way in.

### ESD IN INDUSTRIES

ESD and antistatic safety shoes are used in different type of industries **to protect sensitive equipment or components from electrostatic discharges**, such as aerospace, industrial equipment manufacturing, medical industry, hospitals and many more.

#### ESD can prevent a range of harmful effects on worksites.

Uncontrolled release of static charges can cause gas, fuel vapour or coal dust explosions, as well as failure of solid state electronics components such as integrated circuits. Therefore it's crucial that people who work in these environments **wear ESD or antistatic safety shoes** to protect all electrical components.

### COMFORTABLE WORK SHOES

Apart from price and durability, you must consider features that make a comfortable work shoe something that pushes you forward rather than holding you back. The best way to start, when looking for comfortable work shoes, **is to ask yourself what features can't be missed** for your work environment.

Technology within the work shoe industry has been on a fast track for quite some time. The safety and comfort features that didn't exist a decade ago are now very common in most comfortable work shoes, so you need to find out what's vital for your work.

### STEEL TOE CAP

Steel toe caps are naturally stronger than composite toe caps, a thinner layer is used in the work boots to reach the same strength as a composite toe. They are cheaper compared to composite toes and are conducting cold, heat and electricity.

### Mid-cut safety shoe with reflecting heel part

Sole	PU/PU
Toecap	Steel
Midsole	Steel
Lining	Mesh nylon
Insole	Soft Impact Foam
Category	S1P / SRC
Size range	EU 37-47 • UK 4-12 • US 4.5-13 • CM 24-31

### SHOCK ABSORBING

Shock absorption prevents tired feet. Every time you take a step, the sole absorbs the shock that would otherwise propagate in the legs and back. It gives a walking comfort beyond the usual – even on hard surfaces and after many hours on one's feet.

### Low-cut safety shoe with reflecting heel part

Sole	PU/PU
Toecap	Steel
Midsole	Steel
Lining	Mesh nylon
Insole	Soft Impact Foam
Category	S1P / SRC
Size range	EU 37-47 • UK 4-12 • US 4.5-13 • CM 24-31

SAFETY JOGGER  
 TRACTION BY  
 SHOES  
 FOR CREWS™

## HIGH PERFORMANCE TRACTION by Shoes For Crews

The Shoes For Crews collection has a TripGuard™, because bulky, squared off lugs at the front of a shoe can cause a tripping hazard. The slight curve and tighter lug pattern of the TripGuard™ design promotes smoother transitions between floor surfaces, from smooth to slippery to carpet to tile.

The job you have determines how you move at work and what kind of traction you need. ZoneTraction™ combines the most efficient and powerful traction patterns, and puts them exactly where you need them most on the bottom of your boots or shoes to stay safe.

### **CERTIFIED SLIP RESISTANCE**

The SRC standard meets the requirements of both SRA and SRB, meaning the slip resistance of the outsole was tested on a ceramic tile wetted with a dilute soap solution and on smooth steel plate with glycerol. Safety Jogger's slip resistant outsoles pass all tests with glance and do not only fulfill the minimum standards, but exceed them remarkably.

## ALUMINIUM TOE CAP

Aluminium toe caps bring the resistance of steel toes to a lighter weight (30-50% lighter than steel). Alloy toes have a low profile, which makes them ideal for sportive safety shoes. The average weight of the aluminium cap is about 50/60gr.

## This is a safety sneaker

Sole	Rubber

Size range	EU 38-47 • UK 5-12 • US 5.5-13 • CM 25-31

## SRC CERTIFIED SLIP RESISTANCE

Slip resistant soles are one of the most vital elements in safety footwear. Every safety shoe standard says safety footwear must have at least one type of slip resistant sole.

## SPORTY AND COMFORTABLE

All safety shoes in our selection receive an ANSI or ISO standard. Whether you prefer a traditional leather or an athletic safety shoe, all will have the basic set of safety features (toe cap, slip and oil resistance, ...) combined with extra features like a waterproof lining, electrical hazard protection and many more to keep a worker safe on the job!

The combination of a pre-moulded and removable EVA insole with an anti perforation SJ FLEX midsole grants Safety Jogger womens safety shoes the feeling of a running shoe. The result is a sporty, comfortable safety shoe. A must-have for every hard working lady.

## SJ SOCK

## SJCOMFORT

## SJ/MAX-3FIT SYSTEM

### Comfortable socks

Since safety footwear is mostly made of tough and harsh materials, it's essential to wear the best quality work boot socks to go with your boots. Our socks are designed to feel comfortable while working and because every foot is different, there is an elastic and fortified ankle so the Safety Jogger work boot socks seamlessly follow the anatomic shape of every individual foot. This way, you will not be bothered by annoying folds that create an uneasy feeling.

### Cut resistant HPPE (high performance polyethylene) glove with foam nitrile coating

The seamless PROCUT cut resistant gloves of Safety Jogger guarantee a huge dexterity, safety, grip and reliability. They were designed to provide maximal strength in heavy working conditions. Next to a maximal cut resistance (level 5) these gloves provide excellent comfort and dexterity. The ideal solution for work activities with risk of cuts.

Extreme ultra high level of cut resistance and high level of dexterity due to the 18 gauge lining.

EN 388:2016

- High level of cut resistance with a fully wrist protection
- Extreme dexterity due to the 18 gauge lining
- Sizes 8,9,10 and 11

EN 388:2016

- Ultra-high level of cut resistance with a fully wrist protection
- Extreme dexterity due to the 15 gauge lining
- Sizes 8,9,10 and 11

**SHIELD**  
**4543**  
**4X43C**

HPPE liner

**Cut resistant HPPE (high performance polyethylene) safety gloves with polyurethane coating**

The seamless SHIELD cut resistant gloves of Safety Jogger guarantee a huge dexterity, safety, grip and reliability. They were designed to provide maximum strength in heavy working conditions. Next to a maximum cut resistance (level 5) these gloves provide excellent comfort and dexterity. The ideal solution for work activities with risk of cuts.

Highest level of cut resistance with a fully wrist protection.

EN 388:2016

- HPPE liner
- Polyurethane grip
- Anti cut level 5
- Sizes 7, 8, 9, 10 and 11

**PROTECTOR**  
**4544**  
**4X44C**

double nitrile coating

**Cut resistant HPPE (high performance polyethylene) safety gloves with double nitrile coating**

The seamless PROTECTOR cut resistant gloves of Safety Jogger guarantee dexterity, safety, grip and reliability. They were designed to provide maximum mechanical strength for light to heavy working conditions. Next to a maximum cut resistance these gloves offer huge comfort and dexterity. The ideal solution for activities in less favorable conditions.

Seamless HPPE liner with double nitrile coating. First coating (blue) on the palm of the hand and on 3/4 of the back of the hand. Second coating (black) in foamed nitrile (for better grip in humid condition) on palm of the hand and fingertips.

EN 388:2016

- HPPE liner
- 1st layer in blue nitrile
- 2nd layer in black foamed nitrile
- Anti cut level 5
- Sizes 7, 8, 9, 10 and 11

# Standard EN 388:2016

## GLOVES PROTECTING FROM MECHANICAL RISKS

This standard applies to all kinds of protective gloves in terms of physical and mechanical hazards caused by abrasion, blade cuts, puncture and tearing. The level of protection against mechanical hazards is expressed by an icon followed by four numbers (performance levels), each representing the performance against a specific hazard.

The EN 388, similar to ANSI/ISEA 105, is the European standard used to evaluate mechanical risks for hand protection. Gloves with a EN 388 rating are third party tested, and rated for abrasion, cut, tear, and puncture resistance. Cut resistance is rated 1-5, while all other physical performance factors are rated 1-4. Up until now, the EN 388 standard used only the "Coup Test" to test for cut resistance. The new EN 388 2016 standard uses both the "Coup Test" and the "TDM-100 Test" to measure cut resistance for a more accurate score.

Performance Level Rating						
Test	0	1	2	3	4	5
a. Abrasion resistance (cycles)	< 100	100	500	2000	8000	-
b. Blade cut resistance (factor)	< 1.2	1.2	2.5	5.0	10.0	20.0
c. Tear resistance (newton)	< 10	10	25	50	75	-
d. Puncture resistance (newton)	< 20	20	60	100	150	-

Gloves with Level Rating	
Article	Level
Procut	4X42D
Proshield	4X42F
Protector	4X44C and 4544
Shield	4X43C and 4543
Prodry	2131
Allflex	4132
Construhot	2131 / X2X
Constructo	3243
Prosoft	3121
Superpro	4121
Multitask	4131

- a. Resistance to abrasion: based on the number of cycles required to abrade through the sample glove.
- b. Blade cut resistance: based on the number of cycles required to cut through the sample at a constant speed.
- c. Tear resistance: based on the amount of force required to tear the sample.
- d. Puncture resistance: based on the amount of force required to pierce the sample with a standard sized point.

## PRODRY 2131

foam latex coating

**The ultimate solution for usage in dry, wet, warm or cold conditions.  
The all in one safety gloves!with double nitrile coating**

The seamless water repellent PRODRY gloves of Safety Jogger are designed for activities in every environment and for every weather condition. The polyester/nylon liner is provided with a fully latex coating (sky blue colour) and a second roughened latex coating (black colour) on the palm of the hand.

Polyester/nylon liner with maximum comfort. Keeps your hands dry in wet working conditions. Isolating foam latex coating against cold weather conditions.

EN 388:2016

- Polyester / nylon liner
- Foam latex coating
- 2nd roughened latex coating
- Water repellent
- Sizes 7, 8, 9, 10 and 11

## CONSTRUCTO 3243

cotton/polyester  
glove

**Seamless cotton safety gloves for general use  
in heavy conditions**

The seamless CONSTRUCTO gloves of Safety Jogger are designed for general use. Cotton/polyester liner with green latex coating on the palm of the hand. The most used glove for handling for which high abrasion resistance and dexterity are a must!

Extremely flexible and solid. The wrinkled latex coating gives an extraordinary grip.

EN 388:2016

- Cotton / polyester glove
- Wrinkled latex grip
- Extremely flexible and solid
- Sizes 8, 9, 10 and 11

# CONSTRUHOT

**2131**

**X2X**

foam latex grip

## High visibility safety gloves for general use in cold conditions

The seamless CONSTRUHOT gloves of Safety Jogger are used in heavy working conditions. The polyester liner is provided with a heavy black latex coating. A big advantage is the yellow reflecting color for activities where visibility is very important (railways, airports, road works, ...). Thick lining to increase cold protection during work.

Thick lining for more warmth. Yellow reflecting color for higher visibility in dangerous environments.

EN 388:2016

EN 511:2006

- Polyester glove
- Foam latex grip
- Thick lining for more cold protection
- Winter glove EN 511:2006 X2X
- Sizes 8, 9, 10 and 11

## ALLFLEX 4132

nylon/spandex  
glove

### Maximum dexterity and sensitivity safety gloves for the most delicate handling

The seamless ALLFLEX gloves of Safety Jogger are designed for light and delicate applications for which a maximum of agility and sensitivity are an absolute must. Excellent for delicate assembly and other light handling.

Nylon spandex liner with black micro foam nitrile coating for precision handling in dry conditions.

EN 388:2016

- Nylon / spandex glove
- PU-nitrile micro foam coating
- DMF free
- Sizes 7, 8, 9, 10 and 11

## PROSOFT 3121

nitrile coating

### Safety gloves for maximum dexterity and sensitivity with a grey foam nitrile coating

The seamless PROSOFT gloves of Safety Jogger are designed for light and delicate activities for which comfort, dexterity and sensitivity are extremely important. The additional foam nitrile coating provides an excellent grip, even in light oily environments.

The foam nitrile coating provides an excellent grip in dry and less dry environments (e.g. cable laying).

EN 388:2016

- Polyester glove
- Grey foam nitrile coating
- Oil resistant
- Sizes 7, 8, 9, 10 and 11

## SUPERPRO 4121

nitrile coating

### Black polyester safety gloves with a black nitrile coating

The seamless SUPERPRO polyester gloves are designed for light and delicate work activities for which dexterity and sensitivity are required. The black coating provides a remarkable good grip in a light oily environment.

The nitrile coating on the palm of the hand assures a good grip in dry and light oily environments.

## MULTITASK 4131

polyester glove

### Safety gloves with maximum dexterity and sensitivity for the most delicate handling

The seamless MULTITASK gloves of Safety Jogger are designed for delicate and light handlings for which maximum comfort and dexterity are required. Available in black or white polyester with respectively black or white polyurethane coating according to the required activity.

These gloves feel like a second skin to provide maximum precision.

EN 388:2016

- Polyester glove
- Black nitrile coating
- Oil resistant
- Sizes 7, 8, 9, 10 and 11

EN 388:2016

- Polyester glove
- PU coating
- Oil resistant
- Available in black and white
- Sizes 8, 9, 10 and 11

# Why choose Safety Jogger Professional?

Our shoes are equipped with all technical features which are important for nursing staff. Below, you will find more information on the main specifications. Further on in the catalog, you will find the valid specifications per model.

## CE Standard

The **CE certification** guaranties that the shoes are in accordance with the valid European standards for work or safety shoes:

- **EN 20347:** work shoes without reinforced toe.
- **EN 20346:** safety shoes with reinforced toe, resistant to an impact of up to 100 joules.
- **EN 20345:** safety shoes with reinforced toe, resistant to an impact of up to 200 joules.

## Anti-static ESD

By friction of clothes a person becomes charged with **static electricity**. Without a constant discharge, you can easily load up to 3,000 volts without even noticing!

This charge can be unintentionally passed through by touching electronic equipment. 100 volts can already suffice to damage a sensitive (but maybe vital) equipment.

Always wear **ESD (Electro Static Discharge)** shoes to prevent static electricity from building up.

## Shock absorbing & ultra-light

All day long, you are on your feet. The materials Oxyapas uses for the soles and insoles **absorb shocks** and therefor offer **more comfort**.

Moreover, we strive to make our shoes **as light as possible** to make your daily kilometers as enjoyable as possible.

## Slip resistant outsoles

The level of grip of an slip resistant sole is determined by a test measuring the friction coefficient between the sole and the surface.

This is tested on the flat outsole and heel.

If the sole has a good grip on a wet, stone floor (Ceramic surface with a mix of soap and water), it obtains the **SRA standard**.

If the sole has good grip on a dirty, metal floor (Steel surface with glycerol), it gets the **SRB standard**.

If the sole passes the SRA and SRB tests, it gets the **SRC standard**.

Discover our latest outsole with Oxygrip®-technology on page 6. The test results show that Oxygrip® scores far above the required values at both of the tests. Safety guaranteed.

## Removable insole

Most Oxyapas models feature a **removable insole**. Renew your insole at a regular base or use your own orthopedic insoles.

## Maintenance

Do your shoes often get dirty? Choose a model in leather or synthetic leather as they can **easily and quickly** be cleaned with a damp cloth and soap.

## Coolmax®-lining

**Coolmax®** is a technical material which effectively drains perspiration. In contrast to a normal cotton or synthetic fiber, the Coolmax®-fiber consists out of 4 very thin round tubes. Small canals between the tubes transport the perspiration to the outside. As a result, the transpiration spreads quicker and evaporates 4 times faster than using cotton.

## Comfortable and warm fleece jacket

Nothing protects you better against draft. Made of 100% polyester and **extremely practical** thanks to 2 side pockets and a breast pocket for your glasses.

<b>Specifications</b>	100% polyester Washable at 40°C
<b>Size Range</b>	Available in 5 sizes: 34/36 - 38/40 - 42/44 - 46/48 - 50/52

## waterproof boots

Boots labeled 'waterproof' provide the highest quality level of protection from water and liquids. They keep your feet comfortably dry in numerous environments.

## comfortable insole

The comfortable insole is developed with an exceptional perforated structure. This ensures lightness, air breathability and comfort all day long. The SJ Hybrid insole takes full-surface foot support to the next level while maintaining all other features such as shock impact zone, arch support, shock absorption, electrostatic discharge. With this insole, your feet will feel comfortable all day long.

## certified slip resistance

**SRA** slip resistant soles are tested on a ceramic tile wetted with dilute soap solution.

+ **SRB** slip resistant soles are tested on smooth steel with glycerol.

= **SRC** slip resistant soles pass both SRA and SRB slip resistance tests.

## self-cleaning outsole profile
