Paper towels

ZZ- or V-fold are paper towels where each sheet can be pulled off seperatly from the dispenser. Each sheet will unfold cull and the next is ready to hand. They are folded lika a Z, as the name suggests. The tissue is folded in the middle and will intermesh with the next. So you get an accordion-effect.

C-fold is a classic and traditional fold paper towel. They are folded in C-form. Through this special fold it can used folded or open. The tissue will folded once on the long side and again right and left side to the middle. Here are all folded tissues on top of each other. By taking you contact the dispenser and the next tissue.

D-C –fold can also used folded or open. The plain is greater than the normal C-fold. By taking you contact the dispenser and the next tissue. The tissue will folded once on the long side and again twice on the right and left side. Here are the folded tissues on top of one another.

Z-Interfold (wide) is complete unfolded and ready for use tissues. Through the separate taking out of the dispenser you contact only the own tissue. The sheet will taken unfolded and the next is ready to use. The paper will folded on the long side and then you folded the right and left side to the half outward. The tissues are laying on each other.

Z-fold, W-fold or Interfold (narrow) are also completely unfolded, ready-to-use tissues. Through individual withdrawal you contact only the own tissue. The paper will taken unfolded and the next is ready to hand. These tissues are usually for narrow dispensers. The tissue will folded in 4 parts like an accordion. 2 parts will put into each other. So it's easy to pull the next.

Garbage bags

For all the different volumes and forms of wastebins there are garbage bags in diverse sizes, intensities and colours. Normally the garbage bags confirm of polyethylene (PE) or paper. Depending to be produced from polyethylene it is LD-PE (PE with lower density, 25-100 µ) or HD-PE (PE with high density 5 - 30µ).

HD-PE garbage bags are relative stiff. About the lower intensity it will be used for light waste. Equipped with a PP band it can be closed easy.

Garbage bags can be also produce with LD-PE reclaim. It means, that the material is from recycled products (garbage, plastic film). Therefore are variation in color possible.

LD-PE garbage bags are soft and flexible. By reason of the intensity the bags can be used well in all fields.

Some garbage bags are produced with PP band, which closed the bag.
The Styropor-bag is extra large and strong.

Napkins

Napkins with **1/4-Fold** will be creased in the half, so you get a quadrat.

By **1/8-Fold napkin** will the ¼-Fold napkin creased in the middle again. Here we differ between head- and book-fold. The **book-fold napkin** will open like a book, the **head-fold napkin** will creased like a map on the "head", therefore the name head-fold napkin.

Interfold dispenser napkins are simple creased in the middle and will culled how by V-fold. The next napkin is readily available.
Dispenser napkins are 3-fold creased. This art of napkins are often in ice cream parlour in dispensers, you pick simply one off. **Novafold** are 1/8-fold napkins, but not justified. These napkins have a app. 2 cm edge to take easieer from the dispenser.
